Student proposal is in the works for new rec center

By Mary Anne Talbott
Staff Writer

A new proposal for a campus recreational facility that includes student input and partial state funding is being compiled by a special student committee.

John Rembao, director of the committee, said they have been gathering information from the trustees, other schools and groups within the university since July to put together a proposal that will work as planned if approved by the students.

Because of the careful planning process and the state procedures the committee must follow, Rembao said he isn't sure when the proposal will be presented to the University Union Advisory Board and ASI for approval for student vote.

"Everybody would like it to be at the end of November," he said. The committee will present preliminary building costs to the UUAB Thursday afternoon.

Rembao said the main difference between this proposal and the one put to student vote in spring of 1983 is students will have more influence in the type of facility chosen and will receive specific information on building and operating costs.

Later this quarter, students will have the chance to choose between four different types of facilities. One will be entirely student-funded. The other three will be small, medium and large versions of a partially state-funded facility. The state could pay between \$2.4 and \$3.6 million for the construction of the facility.

"I think the students need to see exactly what they'd pay," Rembao said. The committee will also distribute fact sheets and brochures with details of the proposal to the student body.

He added that several other universities in the system have tried to get recreational facilities approved by the student body but failed. "A lot of the reason why they're failing is because there wasn't clear information for the students. They were in so much of a hurry, they'd just spill out information all the time," he said.

Humboldt State University had the opportunity to get state funding for a recreational facility, but the proposal failed. "They didn't make sure the students knew exactly what was happening," he said.

"The only school that did their homework was San Jose State, and they have the facility," he said.

Besides gathering information on building costs and possible state funding, the committee did marketing research to find out what students want in a recreational facility. Rembao said the top three choices were racquetball courts, a weight room and swimming pools.

The committee also consulted with the heads of athletics, physical education and recreation. "Crandall Gym will be gone in a year or two," he said. This is because the Business Administration and Education Building will expand to Crandall Gym. He said he hoped the new facility could also fill the needs created by the loss.

Experts give insight

Professor to examine Mexican quake

By Jan Sprague
Staff Writer

A Cal Poly architectural engineer and geologist have more than the usual interest in the recent Mexico City earthquake. Both teach classes dealing with the unpredictable nature of earthquakes. And both are respected contributors to the expanding field of earthquake science.

Satwant Rihal, an architectural engineering professor, said he hopes to leave soon for Mexico City to find answers to why some of the buildings stood while others tumbled.

"Even though Mexico City was some 250 miles away from the epicenter of the quake, the buildings there were subjected to long periods of earthquake waves, some two seconds in duration," said Rihal. "This means the buildings start at a neutral position, tilt to one side, come back, and then tilt to the other side."

Such movement causes great stress on the

building structures, said Rihal. While some buildings endured the stress, some did not. "Were there construction errors, or design flaws? A careful examination is in order so that we can learn how to prepare for earthquakes here," said Rihal.

Although 99 percent of Mexico City survived the earthquake, that one percent of the buildings that failed caused a tragedy, said Rihal. "Those buildings were built in the '50s, were in the 15-16 story range and probably couldn't survive the tremendous whiplash effect of the cyclic earthquake waves," said Rihal. A lot of the buildings that collapsed were built out of concrete. "A very strict examination of the detailing and any building flaws needs to be done."

Because there is no way to predict earthquakes, we need to prepare ourselves here in California.

"In 1857 there was a comparable earthquake

Toby Goldman, right, helped Felipe Alvarez locate his family after the earthquake in Mexico City.

100 people evacuated when alarm sounds

By Carol A. Maltman
Staff Writer

More than 100 people were evacuated Monday afternoon when a fire alarm sounded at the University Dining Complex.

A deep fat fryer, which was being changed in the kitchen was set in a barrel with moisture in it. The combination of hot oil and water created steam that set off the alarm, said John Paulsen, director of the Cal Poly Fire Department.

The Staff Dining Hall, Snack Bar, Student Dining Hall, kitchen and all offices in the dining complex were evacuated, said Pat Hosegood, safety officer for the Cal Poly Foundation.

No injuries or damages were reported said Paulsen. People were allowed back into the com-

plex about 15 minutes after the alarm went off.

In an unrelated incident, toilet paper, sewage and drowned cockroaches flowed from a broken sewage line near the University Dining Complex on Inner Perimeter Road.

Blockage in the sewage line was caused by tree roots growing into the pipes, said Ken Meeks, a plumber for Cal Poly Plant Operations. He said the tree roots grow towards water, and the sewage lines act as good fertilizer. He added this is not an uncommon problem on that area of campus.

The sewage line was supposed to be replaced, but due to low priority and lack of funding, it had not yet been replaced, Meeks said.

Radio club contacts survivors in Mexico

By Jan Sprague
Staff Writer

For at least one Cal Poly student, hearing about the earthquake in Mexico City lead to three days of anxiety.

Felipe Alvarez, a senior animal science major, couldn't find out if his parents, brother and sisters had survived the two earthquakes that hit Mexico City Sept. 19 and 20. Telephone earthlines were destroyed, and information was scant at first, said Alvarez, who first heard of the earthquake when a friend from Bolivia called him to find out how his family was.

"I was shocked when I first heard about it," said Alvarez, who immediately turned on CNN for up-to-the-minute reports. "I couldn't concentrate on school, or even think about the beginning of classes."

"I went to Los Angeles that weekend, where a television station was broadcasting a number you could call for help, but there was no getting through. Then I thought about

hopping on a plane and flying to Mexico City, but decided there wasn't too much I could do once I got there," Alvarez said.

"Finally I found out through the Activities Planning Center on campus about the Cal Poly Amateur Radio Club. I called one of the members, Toby Goldman, who immediately helped me."

Goldman and Alvarez tried for hours to get in touch with ham radio operators near Mexico City. "Finally we contacted Piero Luraschi, an operator who lived near the freeway system in Mexico City. He was also trying to help several other people from Texas, Florida, and Arcadia. I gave him my family's name, their address, phone number and my name. Then we had to wait."

Three hours later, Alvarez got the good news. His family was alright and were not injured in the earthquake. "I was so happy. All I could do was jump up and down," said Alvarez. "I couldn't believe the great relief I felt. I'll always be thankful to Goldman and

How do you feel about devaluating the dollar?

by Kevin H. Fox and Kevin Cannon

Heidi Gaian, business, sophomore: I'm against this. I think that it's good that the dollar is strong and they shouldn't take this away from the American people who want to travel or invest overseas.

Scott Lee, architecture, junior: I haven't heard much about it. I think it would be great, make us more competitive in the world.

Steve Campbell, ornamental horticulture, junior: I don't think they should control the dollar like that. Something needs to be done about the trade deficit, but not this.

Kimberlee Colbert, business, sophomore: I think they should just leave it as it is. It seems like they always are trying a new gimmick and they never work.

Jennifer Cohn, computer science, graduate student: I think it would be best to leave it alone. Let it stay in the free market.

John Pressley, physics, sophomore: I think it's a good idea, but you have to look at what happens when you lower the value of our dollar. It might hurt our economy in some way.

Point of Order

Watching student government

Do you know me?

My out-spoken personality gained me attention (and occasionally results) on last year's Student Senate. My appearances (with other student leaders) before the Faculty Senate helped win the students the second week of our current, two-week drop period. My public scrutiny of the Cal Poly Foundation helped get me an interview with President Baker and students a second seat on the Foundation Board of Directors. It failed, however, to get me either seat or get stu-

dents the right to select the student board members. My candidacy for the ASI Presidency earned me widespread recognition and more votes than either of my opponents, but failed to win me the election. Still, many students don't know who I am.

More importantly, many students don't know what student government is. Every year, student government spends millions of dollars of student-fee money and makes (or fails to make) decisions which affect student for years to come. In Point of

Order, I'll discuss not only what's happening, but why and how — who the key players are, and how their actions affect us. Of course, I'll also interject my own commentary.

After all, this is my turn to be the watchdog of student government just in case there is a need to call a Point of Order.

Steve Dunton is a senior electronic engineering major and a contributing columnist to the Mustang Daily.

Viewpoint

Bottle deposit makes a lot of sense

Seven billion bottles and cans are thrown away each year in California. Something can be done about this tremendous waste of natural resources.

Californians Against Waste (CAW) is an organization dedicated to the implementation of a Bottle Law in this state. Such a law would put a minimum of a nickel deposit on all soft drink and beer bottles and cans and prove beneficial to our state in many ways.

For starters, oil consumption would be reduced by 7,000 barrels a day.

Litter along roadsides would be reduced by about 40 percent and solid waste would be reduced by 6 percent.

Another precious resource — water — would be saved at a rate of 7 billion gallons a year.

Nine states — Oregon, Vermont, Maine, Michigan, Connecticut, Iowa, Delaware, Massachusetts and New York — are already reaping the benefits of bottle laws. Over 90 percent of the bottles and cans in these states are recycled, where California recycles only about 30 percent. In fact, the Michigan General Accounting Office reported bottle and can litter dropped 87 percent the first year their law was in effect.

Litter is not only an eyesore. Discarded bottles and cans in California account for over

224,000 injuries a year, costing more than \$3 million in medical bills. And litter clean-up last year cost state and local agencies over \$150 million dollars. Solid waste disposal added up to over \$1 billion.

Yet a Litter Lobby made up of bottle manufacturers, beverage producers and beverage retailers have spent a bundle fighting bottle bills nationwide. Over \$30 million has been spent in the last 10 years by this group to defeat bottle law initiatives on state ballots.

The reasons for the litter lobby are simple. Beverage companies find more profit in throw-away containers because costs for handling, sorting and cleaning empty containers are prohibitive.

Some retailers are worried they will be swamped with empties. But New York has been innovative in helping solve that problem with reverse vending machines. Consumers put their empty glass, aluminum or plastic containers into the appropriate machine and receive a nickel in return. The containers are crushed in the machine and later picked up by distributors for recycling. Anyway, better to have these containers sitting around a store than buried forever in the ground or cast along the roadside.

Despite the cry that jobs will be lost in the bottling manufac-

turing industry, states with bottle laws have had a net increase in jobs for handling, shipping and cleaning empties.

Once a bottle law is passed, and the fear struck into people's hearts by the Litter Lobby subsides, Californians should like its effects. Surveys in Vermont and Oregon show over 93 percent of the citizens support their bottle law. In Maine, a state referendum to repeal their law was crushed by voters, 84 percent to 16 percent.

Recently, Assemblyman Burt Margolin sponsored a bottle bill in the California legislature. Assembly bill 2020 has passed in the Natural Resources Committee by a vote of 7-4, although aluminum cans were deleted from the bill, and a requirement that most bottles be refillable was extended to imported beers. Still, this bill may not become law because of the relentless Litter Lobby with bottles of bucks.

CAW is an organization supported by the League of Women Voters, California Farm Bureau Federation, Retail and Teamsters Unions, Sierra Club and many other Californians. But more support is needed by writing or calling a state representative in support of a bottle law, or by donating time or money to CAW.

Chuck Buckley is journalism major and a staff member of the Mustang Daily.

Newsbriefs

Tuesday, October 1, 1985

Tornado preceded plane crash

WASHINGTON (AP) — In the minutes before Delta Flight 191 crashed while trying to land at the Dallas-Fort Worth International Airport, a thunderstorm was clearly apparent and a pilot who had just landed noticed what he thought was a tornado along the approach.

But National Transportation Safety Board documents indicated Monday the pilot of Flight 191 never was warned of the storm's severity. Less than 10 minutes before the crash he was told by air traffic controllers that there was "only a little rain" north of the airport.

Investigators have speculated that the Aug. 2 crash, which killed 135 people, was caused by wind shear, a severe change of wind direction that literally forced the Lockheed L-1011 jumbo jet into the ground as it was about to land.

Soviets kidnapped in Beirut

BEIRUT, Lebanon (AP) — Gunmen in Moslem west Beirut on Monday kidnapped three Soviet diplomats and a doctor working at the Soviet Embassy, an embassy spokesman said.

The spokesman declined to give details, but Beirut radio reports said the Soviets were seized from two embassy cars that later were found abandoned near Beirut airport. Witnesses said one of the cars was intercepted by several gunmen.

They dragged two Soviets out, the witnesses said, fired handguns at their feet, pushed them into a white Mercedes and drove off. The other two Soviets were seized from a second car, police said.

They were the first Soviets known to be kidnapped in Beirut since gunmen started seizing foreigners in January 1984. Thirty-five foreigners have been abducted since then and 14 other foreigners are still missing — six Americans, four Frenchmen, three Britons and an Italian.

Student dies after car crash

Susan Schneidinger

By Renee Shupe
Staff Writer

A Cal Poly Recreation Administration major was killed in a car accident on September 12 after falling asleep behind the wheel.

Susan Schneidinger, 23, was driving back to San Luis Obispo after vacationing in the Sacramento area. Her boyfriend, Bo Ducato, was the only passenger and survived the crash after being thrown from the car on impact.

According to Ducato, the car flipped about four times before Schneidinger was thrown from the vehicle. She

remained unconscious and died shortly thereafter of a broken neck and internal injuries.

Scheduled to graduate at the end of fall quarter, Schneidinger was active in her major and had been working the past six months at the San Luis Obispo Recreation Department as a children's day camp leader.

"She was the type of person who could make whoever she met smile," said Ducato. "She was just a sweet girl."

Schneidinger is survived by her mother and two sisters, all of whom reside in the Palos Verdes area.

Botha rules out black equality in voting

JOHANNESBURG, South Africa (AP) — President P.W. Botha Monday offered to include blacks on the President's Council, a 60-member body that advises on legislation, but again ruled out a one-man, one-vote system that would give the majority blacks control.

Botha, addressing a congress of his ruling National Party in Port Elizabeth in the eastern Cape province, declared his commitment to a united South Africa that allows for black rights but said any future system must also protect the rights of whites and other

minorities.

The President's Council, a kind of upper house of Parliament, was revised last year to include mixed-race and Asian members for the first time, but whites still outnumber members of other races and control the body.

Botha appealed to black leaders to join in negotiations, and he did not repeat past conditions for prospective participants such as renouncing civil disobedience.

The president offered no specifics, saying details would have to be worked out in negotiations.

More than 750 people have died in the past 13 months in rioting against the system of white domination, called apartheid. All but seven victims have been blacks or people of mixed race.

Earlier Monday, police said the bodies of three more blacks were found, bringing to eight the number known killed in weekend clashes blamed on black infighting in Durban and on the eastern Cape.

Violence between rival black groups flared near the Indian Ocean port city of Durban.

Summer appointments

□ **Dr. Roger Kenvin** — leader of the theatre and dance department since its creation last fall, he has been named permanently to the post.

Kenvin earned his undergraduate degree in English from Bowdoin College in Maine and his master's degree in English from Harvard University. At Yale University, he majored in drama and earned a master's degree and doctorate in fine arts. Kenvin has studied play writing, television writing, directing, technical theater, theater history and acting. In 1965-66 he was a visiting lecturer in English and drama in India. For three years he was chairman of the cooperative department of speech and dramatic arts at University of Notre Dame and St. Mary's College in South Bend, Ind. Kenvin, who has

written and directed plays, acted and composed music for the theater, also taught at Mary Washington College in Virginia before coming to Cal Poly in 1983.

□ **Dr. Panagiotis A. Papakyriazis** — member of the Cal Poly faculty since 1971, he has been named head of the economics department. He will succeed Dr. George Eastham, who will return to full-time teaching.

Papakyriazis, who received his undergraduate degree from the Athens School of Economics and Business Science and his doctorate in economics from University of California, San Diego, is internationally-recognized for his research in econometrics. A prolific author, he is currently completing an econometrics textbook. He has participated in many international conferences, most recently presenting a paper at the international European meeting of the Econometric

Society of Madrid. Papakyriazis plans to travel to Europe this quarter to do research on the European Common Market.

□ **K. Richard Zweifel** — acting associate dean of the School of Architecture and Environmental Design last year, he has been named permanently to the post. He succeeds Kenneth Schwartz in the position, who has returned to full-time teaching in the architecture department.

A licensed landscape architect in California, Zweifel came to Cal Poly in 1973. He earned two degrees in landscape architecture from University of Wisconsin, Madison. His professional experience has been in both public and private offices and includes work in site design and construction scale projects, regional planning and project management. During a leave of absence from Cal Poly, Zweifel joined a consulting firm in Arizona as a project manager and regional planner for a major environmental study in Southern California. He has served as an officer of the Central Coast Section of the Southern California Chapter of the American Society of Landscape Architects. Also, he has been both Southwest regional director and coordinator for the Council of Educators in Landscape. Zweifel has contributed chapters to several architecture books and has taught in Great Britain.

Faculty appointments

□ **Dr. Dan Bertozzi Jr.** — interim head of the business administration department for the past year, he has been named permanently to the position. He succeeds Dr. Walter W. Perlick, who has returned to full-time teaching after serving five years as department head.

Bertozzi earned three degrees at University of California, Berkeley, an AB in political science, an MBA and a Doctor of Jurisprudence from Boalt Hall. Admitted to the State Bar of California in 1972, he worked for a Fresno law firm before joining the Cal Poly faculty in 1974. On campus, Bertozzi has advised the Society for the Advancement of Management for 10 years.

□ **Dr. Edward Roberts Wood** — an engineer with 30 years' experience in industry and education, he has been named to head the aeronautical engineering department.

Most recently, Wood was manager of the Aeromechanics Section of Hughes Helicopters Inc. in Culver City. Before joining Hughes 10 years ago, he worked for three years in helicopter development and testing for Lockheed California Co. in Burbank. From 1966 to 1970 Wood was an associate professor in the Georgia Institute of Technology School of Aerospace Engineering, with a joint appointment in two departments. He earned his bachelor's degree in civil engineering at Cornell University in 1951. After service in the Air Force as a first lieutenant, he studied for his master's degree and taught basic engineering mechanics at Yale University. There he also worked with early digital computers with funding from an IBM grant.

Reagan optimistic about peace talks

WASHINGTON (AP) — President Reagan expressed optimism Monday about overcoming obstacles to the opening of Arab-Israeli peace talks this year, while Jordan's King Hussein stressed that negotiations must take place at an international conference attended by the Soviet Union.

Reagan and Hussein met for nearly an hour in their second round of talks this year. The meeting came against the backdrop of Reagan's announcement Friday of a controversial, \$1.55 billion weapons package for Jordan.

The United States and Israel have objected to holding peace talks at an international conference because that would give the Soviet Union a role in shaping the future of the Middle East. Israel does not have diplomatic relations with Moscow, and the Soviets have provided arms to Syria and other Arab countries hostile to Israel.

A senior administration official said Reagan and Hussein focused their talks "very intensively" on the organization and structure of an international conference.

"I think headway has been made. This is not the moment, this is not the place to get into the details of that headway," said the official, briefing reporters under rules granting him anonymity.

Reagan and Hussein both have talked about holding negotiations under "appropriate auspices" but have differed on what that should be.

"The time to begin is now," Reagan declared.

Staff announcements

□ **Stephen R. Krauss** — faculty coordinator in the Cooperative Education Program, he has been selected to serve as director of the newly-formed Cal Poly Center for the Arts.

A 1969 Cal Poly graduate, his background includes extensive experience in music, recording, home entertainment, marketing and publishing. As the co-founder of Orion Publishing Co. in San Luis Obispo, he published the first trading guide for high fidelity sound and recording equipment for use by hi-fi dealers and insurance claims agents. He was also the founder and editor-in-chief of Mesa Almanac, a Nipomo-based newspaper.

As director, Krauss will be reporting to a 13-member board of directors which is concerned with the arts programming needs of students, faculty and arts organizations of the university.

□ **Al W. Amaral** — executive director of the Cal Poly Foundation, he was recognized as one of three outstanding staff employees for 1984-85. Also honored were Kathleen Lamoree of the Executive Dean's office

and Ethel Spry of the ASI Business Office. Employees selected for the honor are recommended by a campuswide committee of persons who have received the award in recent years. The committee acts on nominations from members of the faculty and staff and studies the work of nominees before making its recommendation to University President Warren Baker. Each honoree received a certificate and a \$100 check made possible by the Armistead B. Carter Endowment Fund.

□ **Cheryl Joy Daly** — formerly the assistant to the executive vice president for South Chicago Community Hospital, she has begun new duties as assistant director of operations for the University Union.

Daly, selected for the position after a nationwide search, succeeds Joe Willis who served in this position for five years. Schooled at Queens College in New York, the University of Rhode Island and Washington University in St. Louis, she served as a counselor at State University of New York at Plattsburgh.

As U.U. chief line officer of operations, Daly's responsibilities include facility

engineering and services, night management, copy center, audiovisual center, vehicle services and information and reservation services.

Student achievers

The following students have been recognized as Distinguished Greeks of America for Cal Poly by the National Greek Letter Publishing Co.:

Thaddeus Ballantine, Alpha Epsilon Pi; **John Hermle**, Phi Kappa Psi and **Robert DeLaney**, Keith Matalci, Jonathon Shull, Richard Jacobson and James Bickel, all of Delta Sigma Phi.

Individuals were selected on the basis of scholarship, service leadership, brotherhood and achievement on and off campus inside the Greek system.

□ **Eddy Hartzell** — an agricultural science major, he recently took the Supreme Champion Market Beef title at the Los Angeles County Fair in Pomona. His black Chianina and Angus crossbred steer, "Blake," topped the scales at 1,305 pounds. The college reserve champion was exhibited by Heidi Beljeau and weighed 1,200 pounds.

Alumni news

□ **Cristopher Inserra** — a June 1985 speech communications graduate, he will have his play, "Stickman in Paris," produced by the Denver Center Theatre this season. Inserra wrote the play for his senior project and then directed it as part of the requirements for a directing course in the theatre and dance department. "Stickman," a comedy about government employees who become unstable and are sent away to be cured, was written using videotape. Inserra gave simple plot descriptions to student actors and then let them improvise. With about six hours of videotape, Inserra extracted material from the taping sessions and built a play around it.

Building finished

New engineering complex will be operational soon

By Marc Meredyth
Staff Writer

The new engineering building behind Kennedy Library is being used for classes this quarter, but School of Engineering officials stress that the \$5.8 million complex won't be fully operational for nearly a year.

Kirby Jansson, administrative assistant to the dean of engineering, said that from the time a building is accepted by the state until it is completely operational the normal period is one year. Jansson said the School of Engineering took over the building the first week of September.

The building, tentatively called Engineering South though it is on the North side of campus, was scheduled to be completed last May. But when the original contractor, R. G. Fisher of Fresno, filed bankruptcy, construction was delayed.

Dean of Engineering Duane Bruley said every effort was made to get the 64,000 sq. foot building open for the students to use Fall quarter. Bruley said there are 216 student lab stations in the new building and 65 classroom seats that the school wanted to have ready for students this quarter.

"The School of Engineering is more than pleased to have this facility," Bruley said, "and we're looking forward to having quality lab spaces commensurate with the quality of the School of Engineering programs."

Besides the extensive lab facilities, for which \$1.7 million has been allocated for the purchase of new equipment, the building will also house the Dean of Engineering offices, the Mechanical, Aeronautical and Civil Engineering departments, and about 50 individual faculty offices.

Jansson said there are only a few temporary phones in the building at present. He said that once the permanent phones are in, probably by mid-November, the dean's office and the three departments will move in. The faculty will move in after that.

Jansson said the building will have a terminal room with personal computers hooked to the mainframe in the Computer Science building. He said there will also be data communication wiring to all the offices and labs, which enables PCs in the offices and networking capabilities.

Bruley said that in addition to the normal lab spaces, there are also five student project areas. These areas, Bruley said, will be used exclusively for students working on senior projects, master's theses or other research.

Jansson said the architecture of the building is interesting because it doesn't appear to fit in with any of the other buildings on campus, especially the newer ones which are constructed mainly of poured concrete. He said Engineering South looks unusual because it has a steel supporting structure, visible from outside, which allows for mobil walls. If the needs of the engineering program change in 10 years, the walls can be taken down and set up in a different configuration.

The building also has an open courtyard which Bruley says will be used for engineering functions

SHIRLEY THOMPSON/Mustang Daily

Cal Poly's new engineering building opened up for classes this quarter, but it won't be fully operational for at least a year.

and which students can relax or study in. The design of the building around such a courtyard allows for every faculty office to have a window.

Bruley said there will be an open house in honor of the new

building to which alumni will be invited during next year's Poly Royal. In the mean time, he said the School of Engineering will be trying to raise enough money to equip the labs with state of the art equipment.

Calling the search for funds the "Benchmark for Excellence in undergraduate engineering, computer science and engineering technology," Bruley said his office will be appealing mainly to industry to refurbish all the labs

with new equipment.

He said the proposal could be as large as \$5 million, a major capital drive and a big challenge from Bruley's point of view.

DELIVERY THAT'S WINNING THE WEST

WELLS FARGO STUDENT LOANS

Speedy Processing: At Wells Fargo, we're committed to rapid turnaround. Our state-of-the-art student loan system enables us to give your loan request prompt attention and swift handling.

We Make It Simple: No additional bank forms are required, and you don't need to have a credit history or account relationship in order to qualify.

Courteous Customer Service: Our service representatives are ready to answer your questions. We appreciate your business, and we're anxious to make your dealings with Wells Fargo Bank pleasant and hassle-free.

Choose Wells Fargo: If a student loan is part of your plans for financing your education, then

tell your financial aid office that you want to go through Wells Fargo Bank. Soon after you mail us your application, you'll begin to see why Wells Fargo was the smart choice.

If you need more information, we'd be happy to help... phone or write us today!

Tenant, landlord relations

City service lends a helping hand

By Darcy Spangler
Staff Writer

Questions concerning landlord and tenant relations can be answered by a city organization with trained mediators. The Human Relations Commission, an advisory body to the San Luis Obispo City Council, gives advice to tenants on questions like deposits, repairs, eviction and rent increases.

"There may be 35 phone calls a day (dealing with tenant/landlord relations)," said Steve Henderson of the Human Relations Commission. He estimated that 40 percent of all calls come from students.

A popular question by tenants is "Can the landlord increase my rent \$100?" The answer is yes, the landlord can increase rent by any amount by giving tenants a thirty day notice. There is no rent control in San Luis Obispo. Rent cannot be increased if a lease has been signed with a specific amount of rent for the period of the lease.

Other questions concern the return of cleaning deposits and repairs.

He advises students to request for repairs to apartments or rental houses in writing to the landlord. This gives them proof and something to fight with.

For those who sublease, Henderson said there should be some type of formal agreement in writing that outlines all conditions. He said that friends subleasing to friends without written agreements, sometime run into problems when damage occurs.

He added that most problems can be handled

but some cases end up in small claims court when the parties fail to reach a compromise. The commission has trained mediators that volunteer to settle disputes between tenants and landlords.

"In order to have a successful mediation, both parties must agree to sit down and discuss the problem," said Henderson. "We take the middle of the road." After receiving a complaint from a tenant, they call the landlord to hear the other side of the story.

"For every good tenant, there's a bad tenant, and for every bad landlord, there's a good landlord," commented Henderson.

The program is free to San Luis Obispo residents and is unique statewide. This is a heavy rental community and needs such a service, he pointed out.

Volunteers serve on a panel to settle disputes and this year Cal Poly resident advisors are being trained.

"We've never had involvement from the university before," said Henderson.

Another service of the Human Relations Commission is rental inspections. A trained inspector will survey the rental and make a report of the condition of the rental. Copies of the inspection report are sent to both tenant and landlords and can help protect tenant's deposits. The inspection fee is based on the size of the unit and usually costs about \$20.

"This sounds like a lot, but if you're protecting a \$500 deposit, it's a drop in the bucket," said Henderson.

One quarter on Capitol Hill the internship ideal

By Julia Prodis
Special to the Daily

Cal Poly students can work as interns in Washington D.C. for a quarter through a Political Science Department sponsored program called the Washington Center.

A representative of the Washington Center, Lisa Scheitzer, will discuss the internship program tomorrow from noon to 1 p.m. in Erhart Agriculture Building, 138.

"The program gives students an opportunity to get practical experience, be in the Washington environment and make contacts that can be useful for future employment," said John Culver, Political Science Department Head and advisor for students interested in the Washington Center.

According to Culver, the Washington Center internships are full-time, supervised work

experience for undergraduate and graduate students, supplemented by academic seminars. Interns are invited to lectures, panels, and debates where they come in contact with public figures.

"Washington is such a good experience for just about anybody, no matter their major," said Culver, mentioning majors including history, journalism, English, and architecture.

"None of the internships are paid but may lead to something that's paid," he said. A quarter in Washington would cost the student about \$2000.

A journalism student, Margaret Barrett, worked last year for John McLaughlin, a journalist who hosted two political talk shows in Washington D.C.

"One of the most exciting experiences I had was going to the taping and meeting Dr. McLaughlin's guests on the show. I met Congressman Jack Kemp who may run for the presidency in '88, William F. Buckley, and the Communications Director of the White House, James Buchanan."

Barrett was invited to a reception on the White House lawn when the president was hosting a dignitary from Austria. "It was freezing cold in early November, but it was worth it."

Reaction to killer neighbor is mixed

OAKLAND, Calif. (AP) — Theodore Streleski, who beat his Stanford University professor to death with a hammer, has moved aboard a houseboat at an Oakland marina and the reaction of his nautical neighbors has been mixed.

Streleski moved on board the 45-foot Coronado on Friday to take advantage of what he called "very cheap lodging."

"I'd prefer he wasn't here," said Ron Nelson, 44, who lives aboard his sailboat. "I don't think that he ever did pay his debt to society, and I don't think he ever will... I don't think he should ever be out on the streets."

Streleski spent seven years in prison on a second-degree murder conviction for the Aug. 18, 1978 slaying of math professor Karel DeLeeuw to protest what he described as mistreatment of graduate students. He was released earlier this month.

He had spent 19 years pursuing a doctorate at the university.

Mark Fritsch, project manager at Embarcadero Cove where Streleski now lives, said he has "a problem" with having the notorious killer at the marina.

But he added that he doesn't know if Streleski's neighbors will take any action.

And Peggy Orlando, 30, says Streleski's presence won't bother her when she spends weekends on a sailboat at the marina.

"It doesn't really bother me," she said. "I don't think he holds anything against me and he sticks to himself."

Do you know
who to call
for an on-campus
emergency?

2222

As a Marine Officer, you could be in charge of a Mach 2 + F/A-18A, a vertical take-off Harrier or one of our other jets or helicopters. And you could do it by the time you're 23. But it takes a special

commitment on your part. We demand leaders at all levels. We teach you to be one. If you're

a freshman or sophomore, ask about our undergraduate officer commissioning programs. If you're a junior, check out our graduate programs. Starting salaries are from \$17,000 to \$23,000. And

you can count on going farther... faster. We're looking for a few good men.

**Go farther...

Poly student between classes

By Margaret Barrett
Lifestyle Editor

His mother says it's just a phase he is going through. He just has to get it out of his system.

Mike Leong, an industrial engineering major who began working for the Cal Poly fire station last September and worked full-time this summer as a firefighter, agrees with his mother. "I worked on an ambulance for six months, and I wanted to keep my skills up," said Leong. He does not plan to make fire service his career, but he enjoys his full-time firefighting schedule during which he has to work only 10 days a month.

Paul Johnson, also an industrial engineering major who has worked for the Cal Poly fire station for five years, is not sure if he will make firefighting his career either. He does know that he has learned self discipline as well as communication and mechanical skills in his position of responsibility.

"You (a firefighter) are there when something happens," said Johnson. "Especially at three in the morning. We're it," said Johnson.

Approximately 10 students work at the fire station during the summer, with the number increasing to approximately 20 during the school year, said John Paulsen, assistant director of the station for the last two years. In addition to the students, five staff workers are employed full-time.

Paulsen said he tries to hire students with some type of firefighting background in the California Department of Forestry, the United States Fire Service or students who have an Emergency Medical Technician's certificate if they can also meet the physical requirements of the job. Occasionally, he has to hire students with no background because they cannot do the physical part of the job.

"We figure anyone who is going to school here has the brains," said Paulsen. "Some lack in strength, but you have to have both to be a firefighter."

The training for those hired is on-the-job and ongoing, said Paulsen. Employees must learn to attach their breathing apparatus, load and unload hose lines and maneuver ladders, in addition to participating in other training drills.

Students have a choice of three shifts — whatever hours fit into their schedules. They can work from 8 a.m. to noon, noon to 5 p.m. and 5 p.m. to 8 a.m. Staff engineers are assigned to a platoon shift, where they work 24 hours straight. Because Leong is worked full-time in the summer, he also worked a platoon shift.

fight fires es, homework

Leong said students who have worked at the station the longest get first choice at hours. "Seniority rules," he explained.

The firefighters' workday begins by making the daily apparatus check, said Johnson.

"Down to the last light bulb, everything has to work," said Leong.

The rest of an average day might include checking the ventilation and air conditioning units in different classrooms on campus, making sure no exits in buildings are blocked, viewing videotapes on cardio-pulmonary resuscitation and doing household chores.

Because the station must be manned at all times, students eat meals there and if they work the late shift, they also sleep at the station. "It's just like living here," said Johnson.

Paulsen said he and the other full-time staff members keep in mind that their firefighters are students and let them take time to study during heavy pressure periods such as finals week. During usual late shifts, the students have free time after 11 p.m. when they can study, watch television or movies on the video cassette recorder.

The Cal Poly firefighters respond to approximately 450 calls a year, said Paulsen. The majority of the calls are for medical aid. Cal Poly hasn't had any serious fires on campus, except for wild land, in a number of years, he said.

The campus fire department has an "automatic aid" relationship with the City of San Luis Obispo, which means the station will respond automatically to any structural fire in the immediate vicinity of the university, and the city department will do the same.

Cal Poly also has a "mutual aid" relationship with the San Luis Obispo County fire department. Cal Poly firefighters will respond to any type of fires in the county if their help is requested. Paulsen said his firefighters do not fight fires outside of the county because the students' education might be interrupted for weeks at a time.

During the Las Pilitas fire, the experienced students covered the station, Johnson said, and to give the new students on-the-job training, they actually fought the fire.

Cal Poly students perform all aspects of firefighting except driving any of the five vehicles at the station. Johnson said, "Six or seven years ago students drove, but they were a little hard on the equipment so they knocked that off."

Fire apparatus engineer Randy Bello, top, gives a demonstration on fire prevention to an agriculture class. Bello, middle photo, displays four types of fire extinguishers to the students. Left, Sam Swanson operates a fire extinguisher.

CALENDAR

- **Tuesday, Oct. 1** — Photographs for student identification cards can be taken in the Administration Building, Room 209, Monday through Friday from 9 a.m. to noon and Tuesday and Thursday from 2 p.m. to 4 p.m. Students should first pay the \$5 fee at the cashier window in the Administration Building, Room 131E, and present the receipt to the Photo I.D. staff. Three to four weeks after the photo is taken, permanent I.D. cards will be available. The student cards will be distributed in the University Union Plaza.
- **Thursday, Oct. 3** — The Communicative Arts and Humanities Lecture Series will present Kevin Starr, professor of communicative arts at California State University, San Francisco and author of "Land's End" and "Americans and the California Dream." Starr will define, describe and dramatize the key premises involved in the book, "California Vision," at 11 a.m. in U.U. Room 220.
- A film, "Mother Theresa's Address to the National Right to Life Convention — 1985," will be shown in the Erhart Agriculture Building, Room 201, at 11 a.m. The presentation is sponsored by the Fellowship of Active Christian Thinkers.
- Computer Fair, sponsored by El Corral Bookstore, will begin at 10 a.m. in the U.U. Plaza and Chumash Auditorium.
- An hour-long financial aid program will be held at 11 a.m. in U.U. Room 219.
- A two-hour-long workshop called "Overcoming Procrastination" will begin at 10 a.m. in the Learning Assistance Center, located in Chase Hall. Contact the Learning Assistance Center, 546-1256, for more information.
- **Saturday, Oct. 5** — Pep Squad tryouts for basketball, sponsored by the Rally Club, will be held from 9 a.m. to noon.
- **Sunday, Oct. 6** — "Shakespeare Through the Ages," a free public lecture on the master playwright and his relevance to modern times, will be staged in the Fisher Science Building, Room 286, at 3 p.m. The series, sponsored by the PCPA Theaterfest, was funded by a \$7,500 grant from the California Council for the Humanities awarded to the theater company. This presentation was also co-sponsored by the university.
- **Monday, Oct. 7** — "Organize Your Time and Life" is the title of a workshop held in the Learning Assistance Center, located in Chase Hall, 11 a.m. to noon.
- "Shakespeare Through the Ages" will be staged at 7 p.m. at the Veterans Memorial Building on Grand Avenue.
- **Tuesday, October 8** — "Time Management for Students with Little or No Time to Waste" is the title of a workshop to be held in the Learning Assistance Center, 3:15 to 5 p.m.
- "Shakespeare Through the Ages" will be staged at 7 p.m. at the Plymouth Congregational Church in Paso Robles.

Dallas bank teller strikes it rich at Golden Nugget

LAS VEGAS, Nev. (AP) — A 62-year-old Dallas bank teller won \$1.8 million after investing only \$9 in a slot machine in downtown's Glitter Gulch early Monday, saying it ended any worries over Social Security.

"I just know I won't have any Social Security problems," Ann Bailey joked when asked what she would do with the money she won before dawn at the Golden Nugget Hotel and Casino.

"Do you plan to quit gambling?" Golden Nugget chairman Steve Wynn asked as he presented the winner a check.

"No, but I may quit work," she laughed.

Still obviously shaken by the new wealth, Mrs. Bailey said fate played a hand in her giant jackpot.

"Someone else was playing the one (machine) I was headed for," she said. "So I thought 'I'll just give this one a whirl.' Four nuggets came up and I couldn't figure out what had happened."

She hit the winning jackpot on the third pull at the dollar progressive machine.

The divorced mother of two called her son and daughter, then spent a couple of hours trying to sleep, "but mainly just tossing and turning."

She called her employer later Monday morning to break the news, and said he was flying out to Las Vegas later in the day.

Mrs. Bailey said she spends one week in the spring and two weeks in the fall in Las Vegas, and limits her gambling to slot machines and an occasional whirl of the roulette wheel.

Wynn said Golden Nugget hotels in Atlantic City and Las Vegas have paid off three big jackpots in as many weeks. The Atlantic City casino paid a \$1.7 million jackpot two weeks ago and a \$980,000 prize last week, Wynn said.

"I don't want the world to despair," Wynn added. "We still have many more of that size."

Mrs. Bailey said friends visiting the city with her thought she had suffered a heart attack when she tried to tell them of the jackpot.

Reagan praises retiring general

ANDREWS AIR FORCE BASE, Md. (AP) — President Reagan today praised retiring Gen. John Vessey, the chairman of the Joint Chiefs of Staff, as a "soldier's general" who made life better for the U.S. serviceman and helped bolster the defense needs of the nation.

"Gen. Vessey never forgot what it was to be an enlisted man, just a GI," Reagan said at the colorful retirement ceremony.

Vessey, 63, plucked by Reagan from his assignment as Army vice chief of staff in 1982 and elevated to the Pentagon's top military post, promised his wife that he would retire and return to his home in Minnesota by the winter of 1985-86.

"Gen. Vessey always remembered the soldier in the ranks," Reagan told an audience of 2,000 people in a silver hangar bedecked with flags. "America...and these soldiers stood taller because of you."

Stars raise \$4 million for victims of earthquake

LOS ANGELES (AP) — Stars including Ricardo Montalban and Vikki Carr joined by satellite Sunday with celebrities from Latin America in a 12-hour telethon and raised almost \$4 million for earthquake-devastated Mexico.

"In a tragic moment like this, it fills my

heart to see all the Latino artists united," said Rene Enriquez, star of the NBC television series "Hill Street Blues."

"In a moment of tragedy, there are no barriers between countries."

The show started at 9 a.m. PDT and by 7:30 p.m., \$3.8 million had been pledged in

the United States alone, telethon spokesman Steve Moya said. Organizers had hoped to raise \$4 million during the telethon. Totals from the other countries where the program was being shown would not be immediately available, he said.

With the theme "Mexico, Estamos Contigo" ("Mexico, We're With You") the show featured song and dance from performers in studios in Los Angeles, San Francisco, San Antonio, Texas, New York, Miami and Phoenix, Ariz.

On October 8 pull a job out of thin air.

BPI SCAN™, The Satellite Career Network, will beam our live video teleconference to your campus on October 8, 1985. If you are a senior, undergraduate, graduate student or Ph.D. in engineering, computer science or any other technical discipline, plan to attend. You'll learn about career opportunities at the country's top technical organizations. The Satellite Career Network provides the informational link between technical students and their potential employers.

This year's participating companies include: AT&T, Sperry Corporation, National Security Agency, Bell Communications Research, Naval Ocean Systems Center, Tektronix, Inc., Central Intelligence Agency, Aerojet General Corporation, U.S. Nuclear Regulatory

Commission, Garrett Pneumatic Systems Division, NASA, GTE Government Systems, TRW and others. You'll hear about their philosophies, training and job opportunities on our large projection screens. And participate in a live question-and-answer period on our Satellite Career Network with company representatives.

If you're a high achiever with above average grades, we strongly urge you to attend. **Admission is free.** Just mark October 8th on your calendar. Then come to BPI SCAN. You'll see, hear and talk about your future with experts from the nation's top technical organizations.

For a presentation schedule or more information, visit your placement office or call 1-800-328-4032. In Minnesota call 612-370-0550.

BPI SCAN's free teleconference will be held at 10:00 AM (PDT) at Chumash Auditorium—Room 204, California Polytechnic State University

Defeats Fresno State Bulldogs

Women's soccer
wins close game

By Lisa Blair

Special to the Daily

Fresno State may have taken a bite out of the Cal Poly football team, but the Cal Poly women's soccer club would not lay down against the Bulldogs.

The Lady Mustangs proved to be in better shape than in the past as they hustled up some good defense to hold Fresno through two 45-minute halves and two overtime periods to win their first league game of the season 1-0.

"The Fresno team was not in shape — we had the edge because we were in better condition," said J.J. LeGate, coach of the women's soccer team.

Fresno had no substitutions during the lengthy battle, and struggled to keep up with the Mustang kickers. Most of the action took place on Fresno's end of the field, with the Bulldogs defending against Cal Poly's numerous goal attempts. Despite Poly's driving attack, the Bulldogs withstood the Mustangs' offensive pressures and did not break until the first overtime period when Poly scored the winning goal.

"Fresno is hard to score on because they have a good goalie," said Betsy Gazda, vice president of the women's soccer club.

"Be first Cal Poly; be first to the ball," was the Mustangs' motto for the day. Both teams were playing hard, but whoever

'I knew I had to shoot for anything I could get ...'

— Kristin Sandberg

could get to the ball first and score would win, and fortunately for Poly, they followed their own advice.

After playing an aggressive first half and sitting out in the second, Kristin Sandberg came back into the game to apply pressure to the Fresno goalie. About three minutes into the first overtime period, Sandberg was in position to kick the game winning goal.

"I knew I had to shoot for anything I could get, because we needed to score," said Sandberg.

After Sandberg put in the goal, Poly gained the extra push to take control of the Bulldogs and held on for the rest of the overtime to gain a shutout victory.

"We played very well and our fullbacks did a good job," said LeGate. "We had about 15 to 20 shots compared to Fresno's three."

LeGate said even though the team looks good, they didn't put the ball in the net.

Kathy Waldal had a good game at the sweeper spot, said LeGate, and Sandberg clicked with the

all-around good play of the team to shutout the Bulldogs.

He also said the game could have been higher scoring if the girls would have followed their shots all the way into the net. This is, however, something that will come with more practice, he said. The Lady Mustangs will be practicing this week to get ready for San Diego State on Saturday, Oct. 5, at 3 p.m. and Loyola on Sunday, Oct. 6, at 11 a.m. Both matches will be held at Cuesta College.

Lisa Best of the women's soccer club maneuvers past defender in Sunday's match against Fresno State

HUGHES FELLOWSHIPS

Since 1949, more than 5,000 men and women have earned advanced degrees in engineering and science with the help of Hughes fellowships. The Hughes commitment to furthering your education and your career.

More than 100 new fellowships will be available in the coming year for graduate study in:

Engineering (Electrical, Mechanical, Computer, Systems, Aeronautical, Manufacturing)
Computer Science
Applied Math
Physics

As a Hughes Fellow, you could be studying for your Master's, Engineer, or PhD degree while receiving:

Tuition, books, and fees
Educational stipend
Full employee benefits
Relocation expenses
Professional-level salary
Summer employment
Technical experience

Total Value: \$25,000 to \$50,000 a year.

You'll also have the opportunity to gain valuable on-the-job experience at Hughes facilities in Southern California and Arizona while you're completing your degree.

Hughes Fellows work full-time during the summer. During the academic year, Work Study Fellows work part-time while studying at a nearby university; Full Study Fellows attend classes full-time.

Since Hughes is involved with more than 92 technologies, a wide range of technical assignments is available. An Engineering Rotation Program is also available for those interested in diversifying their work experience.

WRITE YOURSELF IN

Quote Book

"Winning is not a sometime thing. You don't win once-in-awhile. You don't do things right once-in-awhile. You do them right all the time.

"Winning is a habit. Unfortunately, so is losing. There is no room for second place. There is only one place in my game and that is first place. There is a second place bowl game — but it is a game for losers played by losers. It is and always has been an American zeal to be first in anything we do, and to win, and to win, and to win.

"Every time a football player goes out to play, he's got to play from the ground up. From the soles of his feet right up to his head. Every inch of him has to play. Some guys play with their heads. That's okay — you've got to be smart to be number one in my business, but more important, you've got to play with your heart. With every fiber of your body. If you are lucky enough to find a guy with a lot of head and a lot of heart, he's never going to come off of the field second.

"It is reality of life that men are competitive and the most competitive games draw the most competitive men. That's why they're there — to compete. They know the rules and the objectives when they get in the game. The objective is to win — fairly, squarely, decently, by the rules — but to win. And in truth, I have never known a man worth his salt who in the long run, deep down in his heart, did not appreciate the grind — the discipline. There is something in good men that really yearns for ... needs ... discipline and the harsh reality of head-to-head combat.

"I don't say these things because I believe in the 'brute' nature of man, or that men must be brutalized to be competitive. I believe in God and I believe in human decency. But I firmly believe that any man's finest hours, his greatest fulfillment to all he holds dear, is the moment when he has worked his heart out in a good cause and lies exhausted on the field of battle victorious."

— Vince Lombardi

Football searches for the light

Bulldogs take a bite but Mustangs will always fight

By Tim Robinson
Special to the Daily

For Jim Sanderson, head coach of the Cal Poly football team, trying to find a silver lining in the Fresno State loss is something akin to the situation that the Notre Dame head coach, Gerry Faust, is facing: there just isn't one.

Coach Sanderson's problems are similar in some respects, yet substantially different in others. Sanderson faces the unenviable situation of a season without one of his outstanding running backs, Jim Gleed.

"We're trying to regroup, but we lost all of our running backs who we planned to play this season. We don't know who is going to start, but it makes it real tough," Sanderson said about the 59-10 loss to Fresno State and of Gleed.

For the Mustang coaching staff, the injury to Gleed creates a severe void, not to mention premature graying. To add to

Sanderson's and the Mustang's dilemma, Gleed was not only a starter, he was outstanding, said Sanderson.

Gleed was leading the conference in yards-per-carry average, with over 5½ yards a carry. The painful fact is that the Mustang coaching staff sees no ready replacements for the injured Gleed. There is, however, an old football cliché that says it's still a team game, and the Mustangs still have a good team.

In the Fresno State loss, Cal Poly suffered some breakdowns in their special team play. The Mustangs allowed a 77-yard punt return to start the third quarter, after trailing 31-3 at the half. This error increased the Bulldog lead to 38-3, and put an early end to any comeback hopes.

"They had more weapons than we did, they were bigger, stronger and faster than we were — it was the fumbles, interceptions and the kicking game that led to the giant score though,"

said Sanderson. "They shouldn't have beat us as bad as they did because our own turnovers and mistakes cost us about 24 points."

The loss was still one of the most lopsided affairs in recent years. It also came into the hands of an undefeated Division I Fresno team, who has already blown out Las Vegas-Nevada and soundly beat Oregon State, also Division I teams.

The Mustangs will have little time to reflect on the loss, however, as they face a University of California, Davis team who won its first game of the season 46-25 over Santa Clara. Cal Poly has dropped the last three meetings to the Aggies, losing last year by a close 10-6 score.

"Davis is always good and has the same profile ... They don't make many mistakes, and they capitalize on yours ... This is a critical game for us because we need a win if we are going to get back on track," said Sanderson.

Getting back on track might be a little easier, considering the return of sophomore giant Eric Tautolo who weighs in at 325 pounds and stands 6-5. Also returning will be junior runningback, Carlos Adams, who has been out with a groin pull.

The upcoming UC Davis game gives the Mustangs an opportunity to do a few things: Poly can even its season record at two wins and losses, devise a new plan of attack and — like Notre Dame's Gerry Faust — find a silver lining after a severe setback.

Irishman wins New York race

NEW YORK (AP) — The 5th Avenue Mile was a pre-race mystery for Ireland's Frank O'Mara. And for the estimated 50,000 spectators who lined the course, O'Mara was a virtual mystery to them.

O'Mara, considered one of the lesser lights in the 16-man field, solved the mystery quickly — in fact, in 3 minutes, 52.21 seconds in winning Saturday's race and convincing spectators that he is a runner to be reckoned with in the future.

O'Mara was such a mystery that he wasn't even listed among the entrants in the official program. This was his first mile road race. And only minutes before the race did he even see the course, because he had not arrived until after midnight Friday, due to travel difficulties created by Hurricane Gloria.

In addition, he never had won a major race against tough international competition. He had spent the summer as a "rabbit," or pacesetter, for Morocco's Said Aouita, the world record-holder for 1,500 meters, in two races in Europe.

O'Mara did have some impressive credentials, although he was largely overlooked in the strong field that included Britain's Steve Ovett, Ireland's Eamonn Coghlan and Ray Flynn, New Zealand's John Walker, Kenya's Mike Boit and Switzerland's Pierre Deleze.

O'Mara had won the 1,500-meter title in the 1983 NCAA Outdoor Championships, had run on University of Arkansas teams that had won several titles at the Penn Relays, and had teamed with Coghlan, Flynn and Marcus O'Sullivan to set a world-best in the four-mile relay Aug. 17 at Dublin, Ireland.

Free.

Get our new \$49* software module when you buy an HP-41.

It's a deal that has no equal, for a calculator that has no equal.

Our new HP-41 Advantage software module packs 12K of ROM. One and a half times the capacity of any other HP-41 module. Large enough to hold the most popular engineering, mathematical and financial programs ever written for the HP-41.

You get comprehensive advanced matrix math functions, roots of equations and polynomials, integrations, base conversion and logic functions, and time value of money functions.

Our new module is also sub-programmable. So you can quickly access just a portion of a program, or transfer that section to your own program.

And it's even menu-driven. That eliminates overlays and reduces the number of prompts.

In short, you get everything it's going to take to help you make the grade in everything from Linear Algebra to Physics to Electronics to Statics and Dynamics.

The HP-41 is a deal all its own. Its operating system is so advanced, it doesn't need an "equals" key. Little wonder it's preferred by more engineers than any other calculator.

This is a limited time offer. Call (800) FOR-HPPC. Ask for Dept. 658B. We'll instantly give you the name of a dealer who has no equal.

Do it now. The phone call is free.

But our new module won't be for long.

Women's volleyball team victorious in PCAA contest

By Lisa A. Houk
Sports Editor

When the weekend goes smoothly and two more wins are added to the record, the Cal Poly women's volleyball team starts to dig into first place.

The Poly spikers won in four games over 19th-ranked Long Beach State, 16-14, 10-15, 15-12, 15-10. At the University of Nevada-Las Vegas, the Mustangs must have wanted to return home early as they swept the Lady Rebels, 15-12, 15-5, 15-9.

These victories raised sixth-ranked Cal Poly's record to 4-0 in the Pacific Coast Athletic Association putting them into first place. Poly's overall mark went to 8-1 after Saturday.

"I'm pleased with the way we handled both matches, and it's always nice to come home with two in the bag," said Mike

Wilton, head coach of the Cal Poly women's volleyball team.

In the Long Beach match, the Mustang attack was led by Ellen Bugalski with 16 kills in 35 attempts, Lynn Kessler with 15 kills in 37 attempts and Kelly Strand added 16 out of 33.

Carol Tschasar led the team with four stuff blocks, and Vera Pendergast put down 10 sets in 22 attempts in her first start of the year. Claudia Hemmersbach, who has been having back problems, will be taking it easy this week.

Coach Wilton said, "Vera is our strong seventh person, and now that we have to use Claudia as little as possible, Vera's been doing the job for us."

At Las Vegas, Poly kept its concentration and with a strong team defense took the Lady Rebels in three straight games.

"We were very business-like

against UNLV, and I think the girls just wanted to get home sooner, so they did it in three straight," said Wilton.

Bugalski again paced the Mustangs by putting down 13 kills in 24 attempts with only two errors, while Tschasar contributed eight kills in 17 attempts, and Pendergast came through with six kills in 16 attempts with only one error.

Wilton said Dede Bodnar had a

sound performance at setter going three for seven in attacks.

The Lady Mustangs got some news from Honolulu, as Hawaii took a three-set victory over top-ranked UCLA, and in the second match the Bruins turned it around and beat the Rainbow-Wahines.

"I'm sure that UCLA and Hawaii are battling it out, but I really don't know how they affect

our standings," Wilton said. "We did well this weekend and all I know is that we won't move down in the ranks."

Poly will host the Aztecs of San Diego State Friday, Oct. 4, at 7:30 p.m. and the Titans of Cal State Fullerton Saturday, Oct. 5, at 5:30 p.m. in the main gym. Both opponents are conference matches for the Mustangs.

Lynn Kessler spikes a shot

ANDY FROKJER/Special to the Daily

Dodgers beat SF; three games to go

LOS ANGELES (AP) — Pedro Guerrero singled in the tying and go-ahead runs in the fifth inning and Mike Marshall added a two-run homer two innings later to lead Los Angeles to a 7-2 victory over the San Francisco Giants Sunday.

The victory reduced the Dodgers' magic number for clinching the National League West title to three, despite Cincinnati's 5-0 victory over the Houston Astros Sunday.

The homer was Marshall's 25th of the season.

Robert Welch, 13-4, extended his lifetime record against San Francisco to 15-2. He struck out four and walked two, allowing six hits during his seven innings. He was relieved by Tom Niedenfuer, who gave up two hits.

San Francisco rookie Roger Mason, 0-3, was the loser.

Seminar helps public prepare for big quake

By Laurie Magin

Staff Writer

Nobody ever knows when disaster may strike, so Sunday evening a seminar was held to help the public prepare for one.

The seminar, sponsored by the Church of Jesus Christ of Latter-day Saints, featured tips on home evacuation procedures, emergency survival and how to make a three-day emergency kit.

"You have to have the right attitude in any emergency situation," said guest speaker Gene Moraga. "Emergency means survival." Moraga displayed his own three-day emergency kit and offered tips on what to put together. Suggested items included:

•Water: One gallon per person. Also, a portable water filtration system is recommended.

•Food: A three-day supply that requires no refrigeration or cooking, such as canned or dehydrated food.

•Bedding: Lightweight sleeping bag and a thermal pad.

•Clothing: Must be comfortable. One change per person.

•Medical and Personal Supplies: Bandages, splints, first aid cream, aspirin, penicillin, calamine lotion, bug repellent, sunscreen, foot powder, ammonia capsules, yellow mercury oxide, toothbrush, dental floss, toilet paper, liquid soap. Ask family doctor for further suggestions.

•Equipment: Portable stove and fuel, eating utensils, dishes, cups, can opener, compass, ax, shovel, bucket, water bag, portable radio, nylon rope, sewing kit, canvas cement repair for tent.

•Fuel and Light: Water-proof matches, candles, flashlight with extra batteries, flares.

Many of the items that are essential for the kit can be easily bought at sporting good stores and through mail-order outdoor magazines. A hikers' pack is most efficient for keeping such a kit because it can hold up to 40 pounds of supplies.

When evacuating your home, it is best to take your own approach. Bicycles, instead of cars, are suggested for transportation.

One of the most important items that can be used in an emergency situation is the survival guide in every phone book. It offers emergency first aid techniques as well as what to do when an earthquake strikes.

the club for their help."

Toby Goldman, an electronics major and board member for the club, said they always try to help during disasters and are willing to help others who have not been able to get in touch with family in Mexico City.

"Anyone who needs help should leave a note in our club box at the Activities Planning Center. They need to tell us who they are, and where they can be reached, then we'll get back in touch with them."

While trying to locate relatives for Cal Poly students, the club is also compiling information on the earthquake. "By talking to residents down there, we have a better understanding of what areas were hit the worst. Sometimes we can tell people if their families are in one of those areas."

The Multi-Cultural Center, located in the University Union,

is trying to help by putting people in touch with organizations that are working to create links with family and friends in Mexico City. One such agency that the center recommends is Mundo Latino, a bilingual newspaper in Santa Maria.

"We are working with short-wave radio stations and the post office to try to help people get information," said Patricia Mendoza, who works for the paper and is currently coordinating calls about the earthquake.

"We've already had 130 calls and 10 people out of those have been able to contact their family," said Mendoza. "Not only the telephone lines, but the communications building in Mexico City was destroyed, making it very difficult to get in touch with people there. We've been working 24 hours trying to find out current information for people, but it is a very slow process."

Newly formed Center for Arts gets director

By Rebecca Berner

Staff Writer

Former Cal Poly student Stephen Krauss has been appointed as the first director of the Cal Poly Center for the Arts, a project which was approved by President Baker last July.

Krauss, a Los Osos resident, was selected for his enthusiasm and speaking ability as well as his extensive background in music, recording, marketing and publishing, said Bessie Swanson, associate dean of the School of Communicative Arts and Humanities and chairperson of the Center's board of directors.

Krauss will coordinate the day-to-day operations of the center, which is designed to increase the number, variety and quality of artists and exhibitions on campus. "What we envision is a clearing house to coordinate all arts events," Krauss said.

"We have a number of people and faculty on campus

Stephen Krauss

who are very interested and active in the arts but just don't have the time to carry out their ideas," Swanson said. She hopes the center, with its new coordinator, will relieve the faculty of the burden of organizing arts events.

Arts disciplines covered by the center will include the performing arts such as dance, music and theater, literary arts such as creative writing, media arts such as film and both two-dimen-

sional and three-dimensional aspects of the visual arts.

"We want the center to be a resource and a service," Swanson said. The center will co-sponsor events with various campus clubs and departments and assist them with contract writing, research and fundraising.

In addition, the center will try to coordinate master classes. For instance, a flamenco dance group from Spain might give a performance and talk with Spanish classes. "We want to mesh classwork with concerts and academic needs with performing events," Swanson said.

Krauss' immediate goals will be to get the center off the ground by working on fundraising and writing grants. "Right now we want to develop the image of the center on campus and in the community and raise money," Swanson said.

The center's board of directors will meet two or three times a month until things get going. "The center is like a new baby that's just been born, we have a lot of growing to do. We're still in the forming stages," Krauss said.

EARTHQUAKE

From page 1

in Los Angeles. It is now long overdue for another of equal intensity. Some studies indicate that strong and great earthquakes are likely to occur every 100 years," said Rihal.

David Chipping, a geologist and physics professor, shares the same view that a large earthquake is long overdue for California.

"You have to pay back the piper equally," said Chipping. "If there hasn't been a quake in a long time, you have to have one to make up for that."

Chipping said although predicting earthquakes is nearly impossible, the Japanese have advanced tremendously in this area. "They have developed the tide gauges, which indicate changes in sea life as land shifts. It's sort of a fat man on a creaky plank situation... you hear the plank creak before it breaks apart."

Apparently no one was monitoring the tide gauges the day the earthquake hit Mexico City, said Chipping.

The best prediction of earth-

quakes is to study history, said Chipping. "We know that every 200 years we have a large quake of some 8.5 in magnitude, and that every 20 years there is an earthquake in the Parkfield area." Parkfield is northeast of San Miguel, on the fringe of San Luis Obispo County.

"The last earthquake in Parkfield was 19 years ago; that means we are due for one next year." If it is a strong quake, it could damage parts of downtown San Luis Obispo, said Chipping.

Many of the downtown San Luis Obispo buildings were constructed in the 1920s and 1930s with weak building material. "The State Seismic Commission has been saying do this and do that, but politicians won't move to do anything unless the they are pressured by voters."

Chipping said although we are deeply struck by the great tragedy in Mexico City, the impression will be short-lived. "Because the quake was not in the United States, people here will probably forget about it in a few months."

Rihal hopes to bring back

evidence from Mexico City to show politicians that changes have to be made for earthquake safety. He believes that although earthquake prediction is still elusive, earthquake preparedness is a definite reality.

"The Japanese have earthquake drills; they take it very seriously. Our policy makers ought to take it as seriously, said Rihal. "I have suggested to the City of San Luis Obispo that they examine their buildings, but basically it comes down to money. We should also take a survey on this campus to find out where the problem areas are. We don't want to create panic, but being a university, learning is a prime motivation."

On the West Coast, an earthquake is something that will eventually happen, Rihal said, and people can take precautions to prepare their homes. Stocking canned food, water and batteries is something residents can do for themselves.

"The whole issue of preparedness is a lot more important now in light of the Mexico City earthquake. We can study the exterior facades that enclose buildings, the interiors, like ceiling fixtures, and make improvements to reduce hazards," said Rihal.

Builders need to be aware that for just a few dollars they can make a building earthquake-safe, said Rihal. "Putting plywood over the entire exterior and connecting it securely to a plywood roof, then bolting the perimeter walls with tie-downs will increase a building's chance of survival."

Rihal teaches an earthquake design class each winter quarter at Cal Poly to senior architectural engineering students. "It is a required class," said Rihal, who is currently on leave to do work at the Earthquake Research Center in Berkeley.

For a developing country such as Mexico, the earthquake was a horrible occurrence, said Rihal, but there has been some positive effects. "Perhaps the greatest lesson for us is that the international community can work together during times of great tragedy. I believe the call for international cooperation during times like this will lead to world peace. This is an aspect we should not lose sight of."

Pioneer the future.

Join us in creating the next generation of technological wonders. Our representatives will be on campus to discuss job opportunities if you have a degree in:

Electrical Engineering
Computer Science
Mechanical Engineering
Physics
Manufacturing Engineering

Electronics Technology
Industrial Engineering

On Campus Interviews:

October 8

See your Placement Office for complete details.

Proof of U.S. citizenship required.
Equal opportunity employer.
